

BRKT3560-23

Mounting bracket for Cisco 3560 series switches in 23-inch bays

FRONT VIEW:

REAR VIEW:

CBM of America's BRKT3560-23 is a bracket designed for mounting Cisco's 3560-series of switches in 23-inch bays or relay racks. It is more universal than the original Cisco bracket, providing more mid-span mounting options, and like the original supports racks with 1-inch or 1.25-inch hole spacing. These brackets are constructed of 12 gauge steel and coated in a smooth gray powdercoat.

The BRKT3560-23 package contains a pair of brackets and four 12-24 x 3/8 inch zinc-plated, panhead, cross-drive screws with integral lock washers (external-tooth star type). It should be attached to the 3560 using the Cisco-provided screws.
